

React Notes

- React is a JavaScript library for building user interfaces.
- JSX lets you write HTML-like syntax in JavaScript.
- Components are reusable UI blocks.
- Props pass data from parent to child.
- State stores changing data using `useState()`.
- `useEffect()` handles side effects like API calls.
- React Router enables navigation between pages.
- Firebase Authentication provides login/signup.
- MERN = MongoDB, Express, React, Node.js.
- Practice by building projects.
